

An example of implicit values

- Exercise – two groups given instructions for rules of the game.
- The two groups need to carry out actions according to the rules. But, they are not allowed to communicate about the rules.
- Frustration ensues when each groups act counter to the “rules”
- Turns out both groups were given different rules.

Collective Goal: Scientific Excellence

The panel defines **scientific excellence** as the equitable optimization of knowledge, infrastructure, and innovations, and includes technical and nontechnical contributors and stakeholders, which produce higher quality and more innovative outcomes.

By this definition, **true scientific excellence is not possible without equitable participation.**

Guiding Principle

The pursuit of science, and scientific excellence, is inseparable from the humans who animate it.

Values Framework

Dr. Jedidah Isler

Astronomy & Astrophysics Values Framework

These values are reflected in the founding documents of the federal agencies that support astronomy and are reflected in best practices reported in the literature, white papers and public town halls for the decadal survey, the expertise of the panel, and numerous National Academies reports and consensus studies.

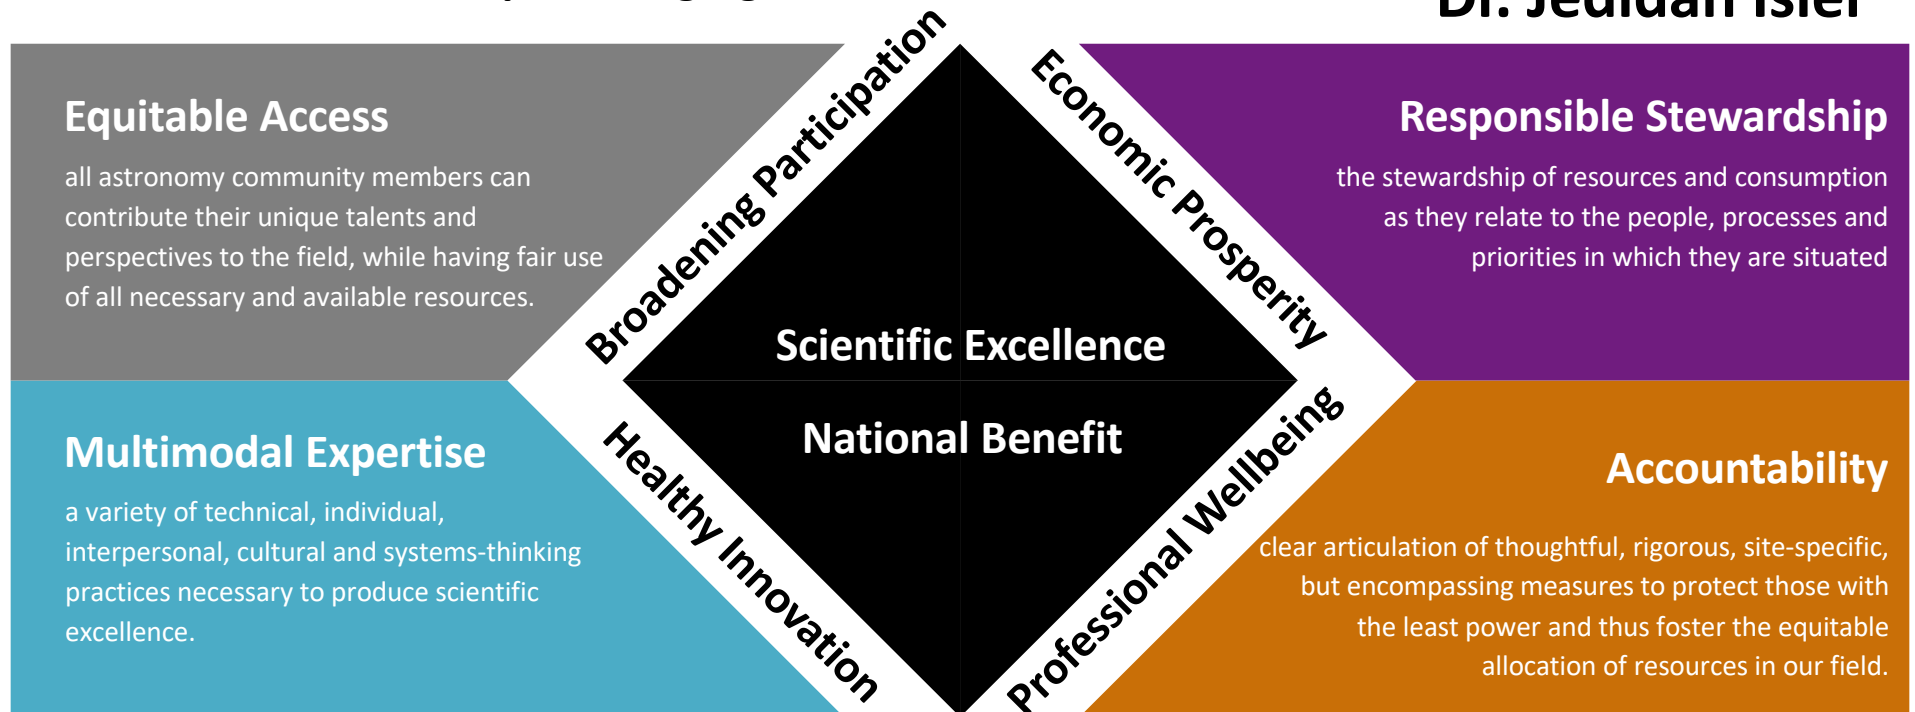

Founding documents are created by the people.

Values Framework

Dr. Jedidah Isler

Sponsoring Agencies

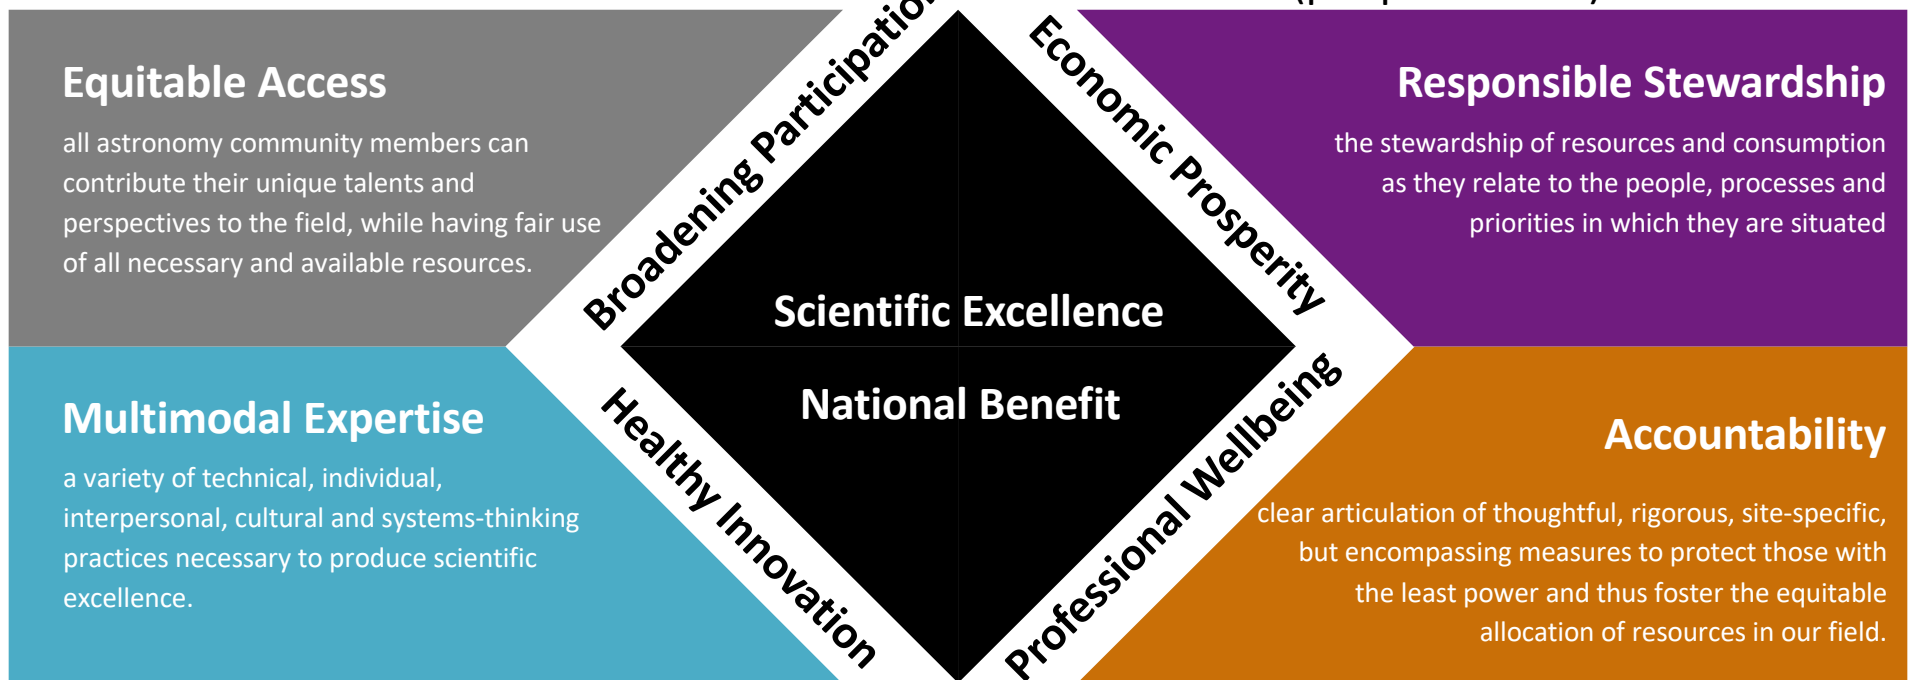

Planetary Sciences Decadal – Equitable access: “Ensuring **the broadest level of participation** is necessary to produce high-quality science in an environment of fierce competition for limited human resource”. Multimodal: “Recognizing the Value of Community Service Work”. Responsible Stewardship: “Hostility & Harassment”

Values Framework

- Who gets to participate?
- Who gets to advance?

Sponsoring Agencies

- How do we responsibly use and sustain our resources (people & land)

- Who gets to lead?
- How should leaders lead?
- What is innovation?

- How do we convince stakeholders (the tax payer, students, scientists) of our integrity?

Astro Decadal Recommendations: Accountability & Misconduct

Goal 4, Suggestion 1:

Recognize identity-based discrimination and harassment as **equally deleterious as research misconduct** in terms of its effects on the integrity of research.

→ Establishing sexual harassment as a serious issue would require that federal funding agencies be notified by funded institutions when PIs, co-PIs, and grant personnel have violated sexual harassment policies

Goal 4, Suggestion 2:

Support individuals marginalized by harassment and discrimination.
