

Authorship & Proposals: Ethical Issues

- Grant Management
- Who should be included when you publish a paper using data from a proposal with a big collaboration?
- (self)Plagiarism? for proposals there is no copywrite... (next lecture)

Grants and Management

Science PI :

Administrative PI:

Grants and Management

Science PI :

- Carries out the science/technical components of the grant
- Often funded by the grant or supervises people funded by the grant.
- Can be Grads, Postdocs, Faculty

Administrative PI:

- Responsible for fiscal oversight, compliance, reporting.
- This person controls the budget.
- Generally Faculty. Never Grad. Sometimes Postdocs (depending on the institution)

Case Study: Admin vs Science PI

- A Postdoctoral fellow (independent) has a research grant successfully accepted. They are the science PI.
- The funding is awarded to the university and must be managed by an administrative PI who had nothing to do with the fellowship.
- The administrative PI funds their undergrad from the award. The undergrad reports to the admin PI and works on science tangentially related to the Postdoc's.
- Is this allowed?
- What are the options for the postdoc?

Authorship Agreements

- These are agreements signed by all members of a collaboration (usually centered around a large proposal / Mission/ Effort)
- JADES (see document)
 - Scope: While data is private.
 - Paper Categories
 - Paper Declaration
- SMASH: (see document)
 - Science Leads vs Architects

Case Study: Publishing data from a collaboration

You are part of a collaboration that proposes to obtain a particular HST data set. A publication plan is developed and submitted as part of the proposal. The data are taken and have gone public in the archive. You decide to publish the data (or a subset of the data) yourself without your co-Is as coauthors.

Qs:

Is this official research misconduct?

Are you violating professional ethics?

What are your responsibilities as a co-I?

When does your obligation to a publication plan (or as a co-I) end?

What are possible consequences of your decision?

Contributor Role Taxonomy (CRediT)

<https://credit.niso.org/>

NISO : *National Information Standards Organization*, a nonprofit membership organization that identifies, develops, maintains, and publishes technical standards to manage information

Q: What is the **weighting of the categories?**

Folks can sit in multiple categories.

Have they done enough to merit authorship?

<https://planetary-research.org/authorship>

Role	Description
Conceptualization	Ideas; formulation or evolution of overarching research goals and aims.
Data curation	Management activities to annotate (produce metadata), scrub data and maintain research data (including software code, where it is necessary for interpreting the data itself) for initial use and later re-use.
Formal analysis	Application of statistical, mathematical, computational, or other formal techniques to analyze or synthesize study data.
Funding acquisition	Acquisition of the financial support for the project leading to this publication.
Investigation	Conducting a research and investigation process, specifically performing the experiments, or data/evidence collection.
Methodology	Development or design of methodology; creation of models.
Project administration	Management and coordination responsibility for the research activity planning and execution.
Resources	Provision of study materials, reagents, materials, patients, laboratory samples, animals, instrumentation, computing resources, or other analysis tools.
Software	Programming, software development; designing computer programs; implementation of the computer code and supporting algorithms; testing of existing code components.
Supervision	Oversight and leadership responsibility for the research activity planning and execution, including mentorship external to the core team.
Validation	Verification, whether as a part of the activity or separate, of the overall replication/reproducibility of results/experiments and other research outputs.
Visualization	Preparation, creation and/or presentation of the published work, specifically visualization/data presentation.
Writing – original draft	Preparation, creation and/or presentation of the published work, specifically writing the initial draft (including substantive translation).
Writing – review & editing	Preparation, creation and/or presentation of the published work by those from the original research group, specifically critical review, commentary or revision – including pre- or post-publication stages.

Authorship Agreements

- [Authorship Contract Template](#)
- Exercise: Try filling out this worksheet for the paper you are currently working on.
